

Study of the multi-strange resonance  $\Xi^{*0}(1530)$  production  
with ALICE at the LHC energies

Jihye Song

# 1 The physics of relativistic heavy-ion collisions

## 1.1 Standard model

## 1.2 Quantum Chromo-Dynamics

## 1.3 The Quark-Gluon Plasma

## 1.4 Heavy Ion Collisions

# 2 Strangeness resonance production in QGP

## 2.1 Strange quark and hyperons

## 2.2 Strange as a QGP signature

## 2.3 Resonances as QGP probes

## 2.4 Theoretical model

### 2.4.1 Statistical model

# 3 The ALICE experiment at LHC

## 3.1 The Large Hadron Collider

## 3.2 The ALICE project

### 3.2.1 ALICE detector

### 3.2.2 Data Acquisition (DAQ) and trigger system

### 3.2.3 ALICE offline software frame work

## 4 Cascade identification using topological reconstruction

### 4.1 Introduction to multi-strange baryon

### 4.2 Topological reconstruction

## 5 $\Xi^{*0}(1530)$ analysis in p–Pb

### 5.1 Data sample and event selection

### 5.2 Topological selection

### 5.3 Monte-Carlo correction

### 5.4 $p_T$ -spectra

### 5.5 Systematic studies

### 5.6 $dN/dy$ and $\langle p_T \rangle$

### 5.7 Particle yields ratios

## 6 $\Xi^{*0}(1530)$ analysis in Pb–Pb

### 6.1 Data sample and event selection

### 6.2 Topological selection

### 6.3 Monte-Carlo correction

### 6.4 $p_T$ -spectra

### 6.5 Systematic studies

### 6.6 $dN/dy$ and $\langle p_T \rangle$

### 6.7 Particle yields ratios

## 7 Further results and conclusion
